

## POLYWOOD AluPure

### SLIDING WINDOWS / SLIDING DOORS

POLYWOOD AluPure Sliding systems precision fits make it extremely quiet and easy to use. With its windows and door sashes high stability, the AluPure profiles ensure that the sliding elements move in nearly perfect silence, even with large glazed areas

AluPure Sliding systems proves a style shaping element for your place. With the Clear design of the sash profiles, AluPure profiles give sliding elements an appealing, distinctive look. The centre section with a door handle from top to bottom provides convincing static properties. Aided by a modular frame system for the range of variants, so you can enjoy the maximum freedom with dimensions of your door.

**AP SL 31 System**  
sliding window

The stable aluminium frame is used as central transom, thus permitting larger units with stability. The insect screen consists of robust fibre glass tissue with a cover of synthetic material and is extremely tear-resistant and long-lived. The optionally adaptable guiderails integrate the track rollers of the insect screen sliding unit and permit a long lasting and easy operation.
